

# Water-based epoxy anti-rust agent for rebar

## Clear Coat W

### **Used for :**

Water-based epoxy anti-rust agent dedicated for rebar

### **Features :**

- Ecologically safe due to water-based type
- Non-flammable and good workability
- Degree of adhesive stress between applied rebar and concrete tested at Japan Testing Center for Construction Materials has reached 96.6%.
- Rust preventive coating normally lasts 3 to 6 months.

### **How to use :**

- Brush off dust and clear off rust & oil content from surface of rebar.
- Stir enough and take only the quantity needed to a separate container.
- Please use without dilution.
- Bending parts of rebar should be applied twice or three times.
- The standard amount of usage is 10 to 15m<sup>2</sup>/kg.

### **Remarks :**

- Please refrain from storage under direct sunshine.
- Please do not add any other liquid including water.
- Wash a brush with water after use of it.
- Clear Coat W is frozen below 0 degrees C. Once frozen, do not use it any more even after unfrozen.
- Please do not use in temperature below 0 degrees C, more than 80% humidity or rainy weather.
